Davanagere, India

CAREER OBJECTIVE

To obtain an entry-level Software Engineer role where I can apply my skills in Python, JavaScript, SQL, HTML, CSS, React, and web development to build reliable and scalable software solutions. I am eager to contribute to innovative projects, strengthen my problem-solving skills, and continuously learn new technologies while working in a collaborative, growth-oriented environment.

INTERNSHIPS

Frontend Development Intern

Jul 2026 – Aug 2026

Cognifyz Technologies

- Developed responsive web applications using HTML, CSS, JavaScript, Bootstrap, Git, and GitHub.
- **Technologies / Skills Used:** HTML, CSS, JavaScript, Bootstrap, Git, GitHub

Python Full Stack Developer Trainee

Feb 2026 – May 2026

Dhee Coding Lab

- Completed practical training in Python, Django, SQL, and modern web development technologies.
- **Technologies / Skills Used:** Python, Django, SQL

PROJECTS

Smart EV Charging Intelligence Platform

Aug 2026

Developer — [GitHub](#)

- Developed an end-to-end EV charging analytics platform to monitor station telemetry, charging power, battery levels, temperature, and energy delivery.
- Built a FastAPI backend with PostgreSQL to collect and store 700+ charging records from multiple EV charging stations.
- Implemented Isolation Forest for automated anomaly detection and developed Power BI dashboards for station performance, charging trends, anomalies, and energy analytics.
- Built a demand/power prediction module to compare actual vs. predicted charging power and analyze prediction errors across stations.
- **Technologies / Tools Used:** Python, FastAPI, PostgreSQL, Power BI, Machine Learning

Yoga Pose Detection Using AI

Oct 2025

Developer — [GitHub](#)

- Developed a real-time yoga pose detection system using computer vision and MoveNet pose estimation to identify and analyze human body movements.
- Integrated MoveNet to detect and track body keypoints, including major joints, from live camera input for accurate posture analysis.
- Implemented pose classification to recognize different yoga poses based on detected body landmarks and joint positions.
- Added real-time visual feedback by displaying detected keypoints and pose information to help users improve posture and maintain correct form.
- **Technologies / Tools Used:** TensorFlow.js, MoveNet, Deep Learning

Crop Price Prediction

Apr 2024

Developer

- Built a Random Forest machine learning model to predict crop prices with up to 80% accuracy.
- Applied feature engineering techniques, including outlier reduction and lag variables, to improve model performance.
- Deployed the model as a Flask web application, providing real-time crop price predictions through a user-friendly interface.
- **Technologies / Tools Used:** Python, Flask, Scikit-learn

SKILLS

Programming Languages:	Python, HTML, CSS, JavaScript, SQL
Frameworks & Libraries:	React.js, Django, Flask, TensorFlow.js
Databases:	MySQL, PostgreSQL
Tools & Platforms:	Git, GitHub, VS Code, Vercel, Power BI
Core Concepts:	Data Structures and Algorithms, Object-Oriented Programming, REST APIs, Machine Learning

EDUCATION

PES Institute of Technology & Management Bachelor of Engineering Computer Science & Design Engineering (VTU) CGPA: 6.8	2022 – 2026
Sir MV PU College, Davanagere Pre-University Certificate Score: 67%	2020 – 2022
National Residential School, Konandur Secondary School Certificate Score: 83%	2020

CERTIFICATIONS

- Web Page Designing using WordPress – PESITM (2023)
- Introduction to Ethical Hacking – Udemey (2025)
- Understanding Incubation and Entrepreneurship – NPTEL (2025)
- Front-End Development Intern – Cognifyz IT Solutions Pvt. Ltd (2026)
- Python Full Stack With Gen-AI – Dhee Coding Lab (2026)

LANGUAGES

English — Kannada — Hindi — Tamil
