## Career Objective

---

To obtain an entry-level Software Engineer role where I can apply my skills in Python, JavaScript, SQL, HTML, CSS, React, and web development to build reliable and scalable software solutions. I am eager to contribute to innovative projects, strengthen my problem-solving skills, and continuously learn new technologies while working in a collaborative, growth-oriented environment.

## Technical Skills

---

**Languages:** Python, HTML, CSS, JavaScript, SQL

**Frameworks & Libraries:** React.js, Django, Flask, TensorFlow.js

**Databases:** MySQL

**Concepts:** Data Structures and Algorithms, Object-Oriented Programming, REST APIs, Machine Learning, Python Full-Stack Development

**Tools:** Git, GitHub, VS Code, Vercel

## Internships

---

**Frontend Development Intern — Cognifyz Technologies**

Jul 2026 – Aug 2026

Developed responsive web applications using HTML, CSS, JavaScript, Bootstrap, Git, and GitHub.

**Python Full Stack Developer Trainee — Dhee Coding Lab**

Feb 2026 – Mar 2026

Completed practical training in Python, Django, SQL, and modern web development technologies.

## Projects

---

**Smart EV Charging Intelligence Platform — Python, FastAPI, PostgreSQL, Power BI, ML** Aug 2026

- Developed an end-to-end EV charging analytics platform to monitor station telemetry, charging power, battery levels, temperature, and energy delivery.
- Built a FastAPI backend with PostgreSQL to collect and store 700+ charging records from multiple EV charging stations.
- Implemented Isolation Forest for automated anomaly detection and developed Power BI dashboards for station performance, charging trends, anomalies, and energy analytics.
- Built a demand/power prediction module to compare actual vs. predicted charging power and analyze prediction errors across stations.

**Yoga Pose Detection Using AI — TensorFlow.js, MoveNet, Deep Learning**

Oct 2025

- Developed a real-time yoga pose detection system using computer vision and MoveNet pose estimation to identify and analyze human body movements.
- Integrated MoveNet to detect and track body keypoints, including major joints, from live camera input for accurate posture analysis.
- Implemented pose classification to recognize different yoga poses based on detected body landmarks and joint positions.
- Added real-time visual feedback by displaying detected keypoints and pose information to help users improve posture and maintain correct form.

**Crop Price Prediction — Python, Flask, Scikit-learn**

Apr 2024

- Built a Random Forest machine learning model to predict crop prices with up to 80% accuracy.
- Applied feature engineering techniques, including outlier reduction and lag variables, to improve model performance.
- Deployed the model as a Flask web application, providing real-time crop price predictions through a user-friendly interface.
